Peisheng Zhao, Sarah Nusser, Leslie Miller

November 2002 **Proceedings of the tenth ACM international symposium on Advances in geographic information systems**Full text available: [pdf\(214.83 KB\)](#)Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

In mobile field data collection, data gatherer requires to get geospatial information service to support in navigating to the right locations, describing context of observed object and providing thematic information for sampling or analysis. The framework how to get this information is subject to the variation in users with different levels of knowledge about information services, applications with different need of information, and limitations of field computing environments. In this paper, we ...
